Statistical Research Service

Vol. 1. No. 1

June 1953

A New Service

With this number, the Bureau of Statistical Services, State Education Department, inaugurates a new service to school officials of the State. Statistical Research Service will release as soon as available the data formerly printed in the bulletin, Public School Finances, together with other useful information. Thus, school officials will have in their hands the same (and more) information at an earlier date. It is hoped this new service will meet with your approval. We invite criticisms and suggestions.

This first number presents information on projected school population and teachers. Such information, while of a state-wide nature, should be useful to school officials in properly evaluating the future need for teachers and for housing facilities. The basis for such projections is the number of children born over a period of years. To convert birth data to future public school enrolment, it is necessary to take into account the effect of migration on the population, the survival ratio and the proportion of the children who will probably attend public school or conversely who will attend private and parochial school. Converting to number of teachers involves the determination of a pupil-teacher ratio or a series of such ratios over a period of years. This ratio is affected by economic conditions and by local school policy.

However, since such projections are important to school administrators they have been calculated through the school year 1957-58, the year the babies born in 1952 will enter schools. In using these data, local administrators will need to consider local conditions carefully, since the material presented represents the average of conditions over the State as a whole.

## Estimated Public School Enrolment

Total enrolment for the State as a whole can be expected to increase by more than 100,000 each year until, at least, 1957-58. If the present rate of outmigration from New York City continues, nearly one-third of this increase will occur in that city while more than two-thirds of it will occur upstate.

Table 1 shows the enrolments which can be expected in kindergarten through the sixth grades and in the seventh through the twelfth grades each year until 1957-58. The methods and assumptions used to obtain these estimates follow those used by Flinton, Armstrong and Soper<sup>1</sup> in 1951.

Beginning with 1952-53, registration in both elementary (K-6) and secondary (7-12) grades will increase annually. The rate of increase probably reached its peak in the elementary grades during the current year when about 104,000 additional pupils were registered. However, an additional 309,000 can be expected by 1957-58. The children who accounted for the increase in elementary enrolments in 1945-46 reached seventh grade in 1952-53, increasing secondary enrolments this year. By 1957-58, enrolments in the secondary grades will have increased over the current year by about 229,000 children.

<sup>a</sup> Figures for 1951-52 are actual enrolments reported to the Bureau of Statistical Services, State Education Department.

### How Many Public School Teachers Will New York State Need?

To provide for the instruction of the additional pupils predicted, the public schools of the State will need about 22,000 more teachers in 1957-58 than in 1951-52, an average of almost 3700 annually. About 2600 more teachers will be needed annually upstate and 1100 in New York City for this period. Table 2, below, presents the estimated number of teachers.

Although the need for additional teachers will remain high throughout these years, there will be a reduction in the number of new positions between 1952-53 and 1956-57 after which an increasing number of additional teachers will again be needed.

Additional teachers were needed in grades 7-12 in 1952-53 for the first time in several years. The demand will continue at the rate of about 1500 a year through 1957-58. Before 1956-57 most of these teachers will be needed in the junior high school grades although the need in the senior high school grades will begin to increase in 1954-55.

## The Trend in Public School Enrolments since 1815

The history of public education in New York State is long and impressive. In 1812 the Legislature established the common school system. Since approximately that date and until 1934 school enrolments increased steadily along with the growth of population, as may be noted from Chart 1.

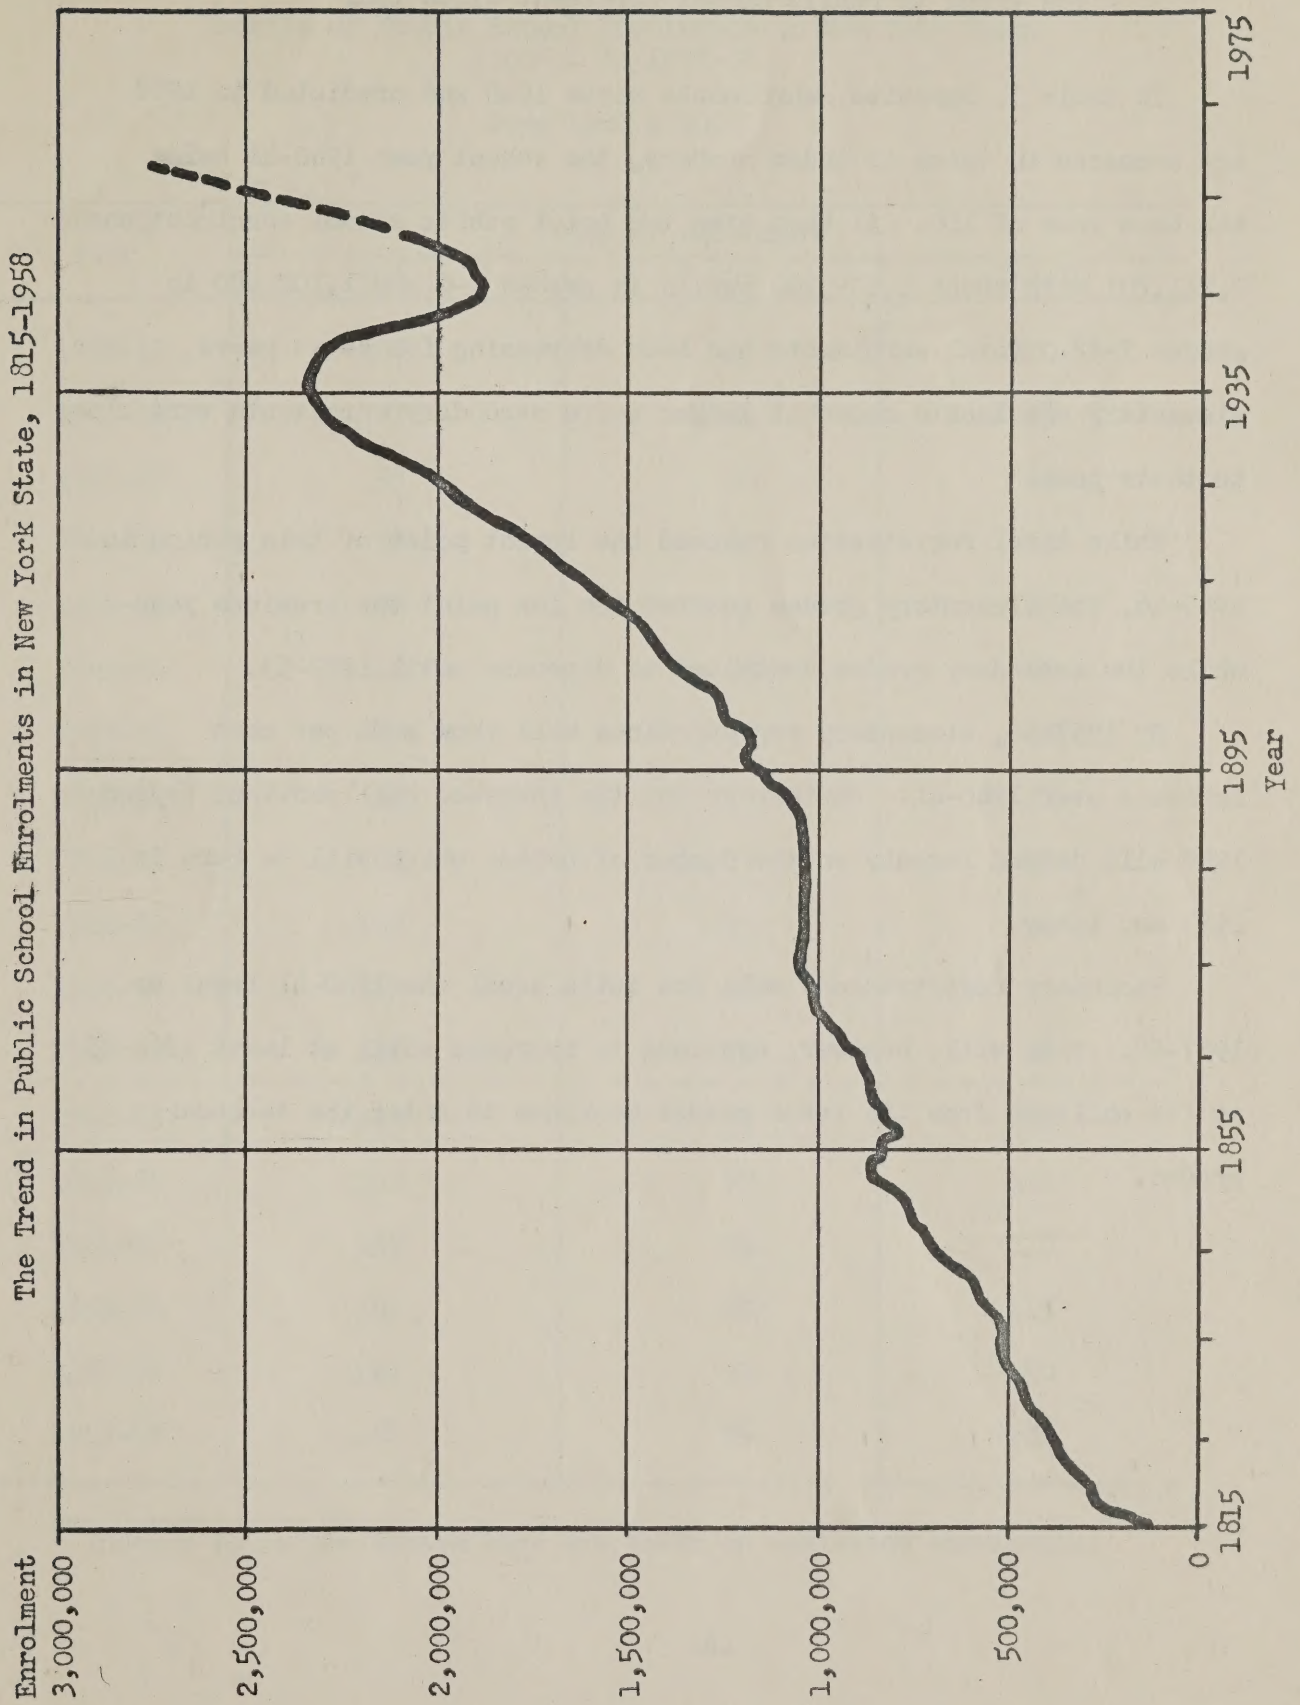

While the general trend is upward with the total public school population of the State nearly 300 per cent higher in 1934 than it was in 1815, there are a few dips and plateaus. The most extended dip previous to 1934 occurred between 1854 and 1858 when school populations dropped 14 per cent. A second dip after 1897 was of two years duration. Between 1870 and 1890, there was a long period during which enrolments showed only minor changes. This was followed by a 44 year period of rapid growth.

The sharp drop in enrolments beginning in 1935 was unprecedented in this long upward trend. The low births of the early thirties, augmented by an accelerated loss in secondary grades during the second world war resulted in an enrolment loss equal to one-fifth of the 1934 peak, or a drop back to the 1922 level. In 1947 the curve took a sharp turn upward, is expected to pass the 1934 level in 1955 and to continue upward for at least five years more.

CHART 1

The Trend in Public School Enrolments in New York State, 1815-1958

## The Trend in Public School Enrolment since 1941

In table 3, opposite, enrolments since 1940 and predicted to 1958 are compared in terms of index numbers, the school year 1940-41 being the base year of 100. At that time the total public school enrolment was 2,211,201 with about 1,109,200 pupils in grades K-6 and 1,102,000 in grades 7-12. Total enrolments had been decreasing for seven years, elementary enrolments somewhat longer while secondary enrolments were close to their peak.

While total registration reached the lowest point of this period in 1945-46, the elementary grades reached the low point the previous year while the secondary grades continued to decrease until 1952-53.

By 1957-58, elementary registrations will show a 54 per cent increase over 1940-41. Whether or not the increase will continue beyond 1958 will depend largely on the number of babies which will be born in 1953 and later.

Secondary registrations will not quite equal the 1940-41 level by 1957-58. They will, however, continue to increase until at least 1964-65 as the children from the lower grades continue to enter the secondary grades.

TABLE 3

Indexes of Public School Enrolments in New York State  
1940-41 to 1957-58

Base 1940 = 100

School year	Index of enrolment <sup>1</sup>		
	K-6	7-12	Total
1940-41	100	100	100
1941-42	97	94	95

1957-58	154	95	125

<sup>1</sup> Indexes below the dotted line are based on estimated enrolments.

## Number of Births

School-age population is estimated from the resident live births adjusted for survival and for migration. Most of the survivors can be expected to attend some school when they reach the ages five to seven and remain until they are sixteen or older.

It will be noted, in table 4, that the number of births increased after 1936 and, after a decrease during two of the war years, 1944 and 1945, reached a new high point in 1947. The provisional figures for 1952 indicate that the number of births for that year exceeded the number for 1947. This 1952 increase of births was entirely upstate, since New York City births for 1952 were still less than those for 1947.

A study of births, by order of birth, shows that the 1947 births contained a relatively high number of first births and that first births have subsequently decreased, while an increased number of second, third and fourth births have resulted in the high number of recent births.

The fact that births did not decrease materially after 1947, as forecasters predicted, and actually exceeded in 1952 the 1947 figure, is a population phenomenon having great effect on school enrolments. Instead of a peak enrolment of one year passing, grade by grade, through the schools, we will have a fairly broad plateau of enrolments, showing little decrease until the whole plateau begins to reach the late high school years.

TABLE 4

Number of Resident Live Births, Upstate New York

<sup>b</sup> Provisional figures.

### Number of Births in Relation to First Grade Registration

The close relationship between births and school registration is shown in chart 2. Here the number of births in New York State are shown in relation to first grade registration six to seven years later. First grade registration from 1952 on has been roughly estimated.

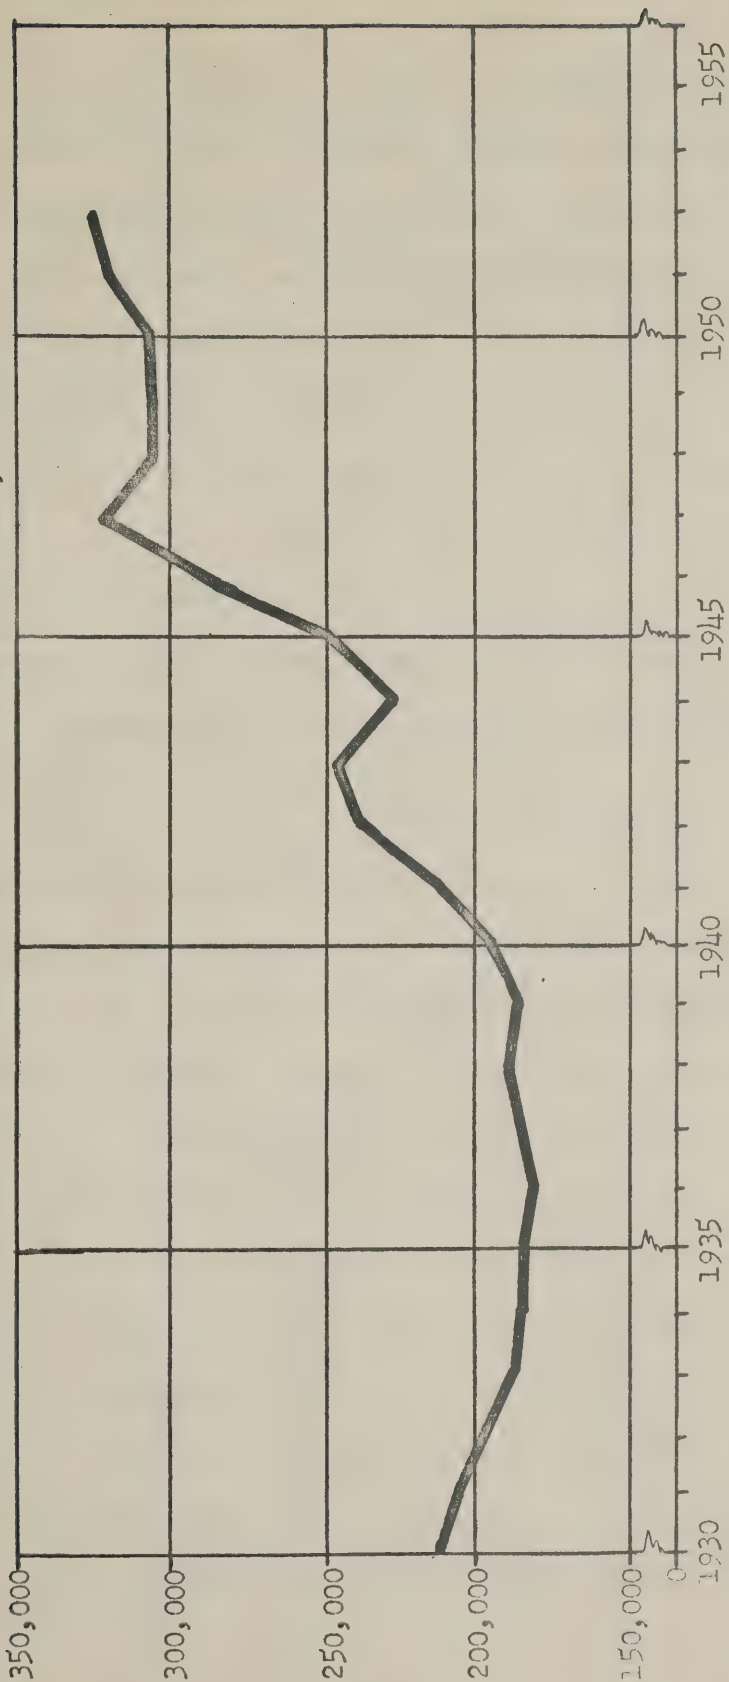

While the shape of the curve is very similar, the trend in enrolments is not quite as steep as the birth curve. In 1937, first grade registration was equal to 95 per cent of the number of children born in 1930; in 1952, to 85 per cent of the number born in 1945. This differential may be explained, at least partially, by an increased percentage of children enrolled in nonpublic schools. It could also be the result of outmigration, a change in the policy of holding back the slower pupils or a change in the age at which children enter first grade.

CHART 2

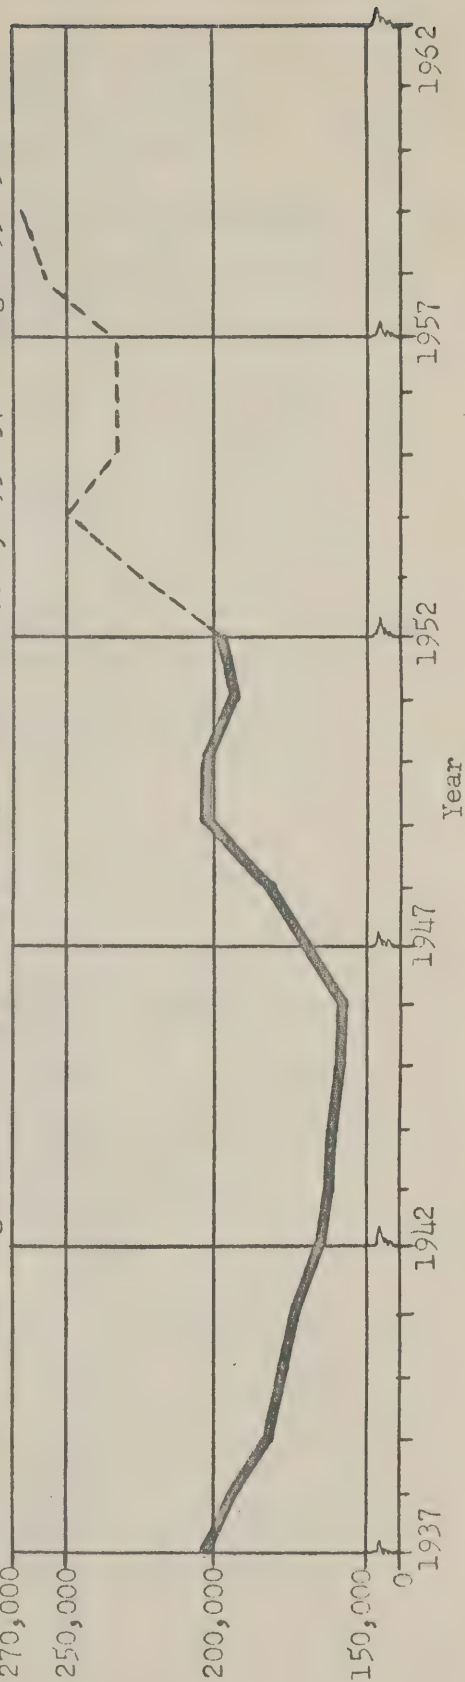

Number of  
births

Number of Resident Live Births in New York State, 1930-52

Registration

First Grade Registration in New York State Public Schools, 1936-37 through 1951-52

## Retention of Children in School

One factor contributing to increasing enrolments is the increasing proportion of the younger age groups entering school and the older age groups remaining in school for a longer period of time. The United States census, as indicated in table 5 shows that since 1910 the per cent of the five and six-year-old population in New York State enrolled in school has increased from 48 to 73 while the per cent of the 16 and 17-year-old population enrolled has more than doubled.

The median years of schooling completed by the population of the State which is 25 years old or older has increased from 8.7 to 9.6 years in the ten year period between the 1940 census and the 1950 census.

## Nonpublic School Attendance

Children may attend public, private or parochial schools or they may receive approved instruction at home. Some will be exempted from attendance because of their physical or mental condition or because of marriage. With the exception of attendance at nonpublic schools, either private or parochial, the number of children involved is small.

Attendance at nonpublic schools, however, has been increasing until more than a fifth of the school age children are registered in these types of school. Table 6, showing the per cent of resident pupils enrolled in nonpublic schools since 1936, indicates the trend in this direction. Even though the school population has been increasing rapidly during the last few years, the nonpublic schools have continued to enrol a slightly larger proportion each year since 1935-36.

TABLE 5

Per Cent of Persons in the Five and Six-Year Age Group and in the Sixteen and Seventeen-Year Age Group Who Were Enrolled in School, New York State, 1910-1950<sup>a</sup>

1943-44	18.5		

<sup>1</sup> Resident pupils are those attending school within the school district in which they live.

## Public School Population Changes by Type of District

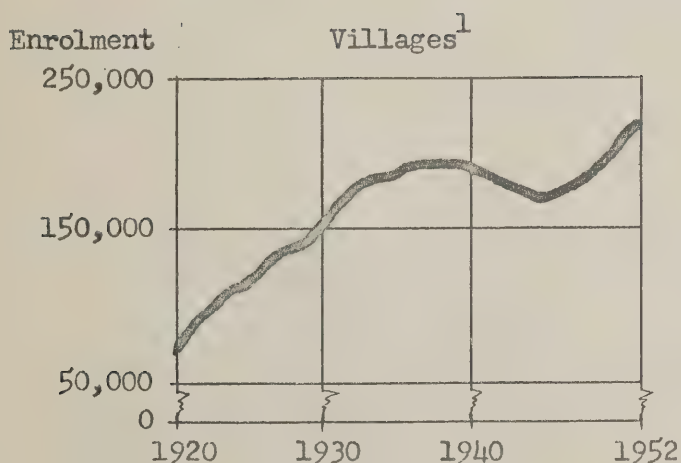

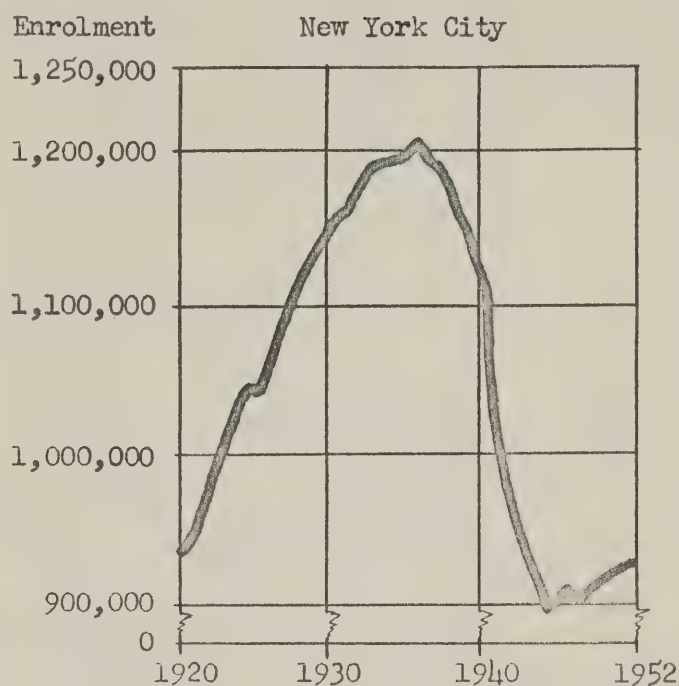

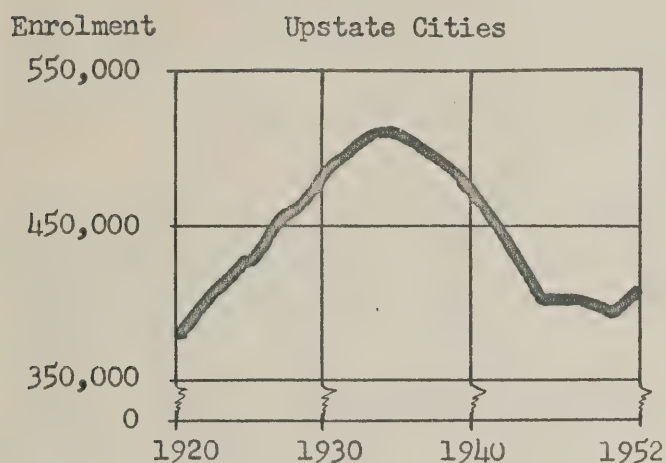

While public school enrolments within all types of districts followed the state trend which rose steadily to a peak in 1934-35 and then declined until 1944-45, they show considerable variation in degree of change, as illustrated in chart 3. Supervisory districts have carried the brunt of the increased enrolments since 1946, having an enrolment 34 per cent higher in 1951-52 than in 1945-46. During this same period enrolments in New York City have increased 3.5 per cent; in upstate cities, 1.9 per cent; and in village districts, 29.6 per cent.

These increases have not been distributed evenly over the State. Nassau county, where the increase has been greatest, contains 12 per cent of the public school enrolment of the State but has absorbed 30 per cent of the increase. The city districts in this county with 2 per cent of the State's city enrolment have absorbed 45 per cent of the increase; and the supervisory districts enrolling 12 per cent of the state enrolment have absorbed 30 per cent of the increase.

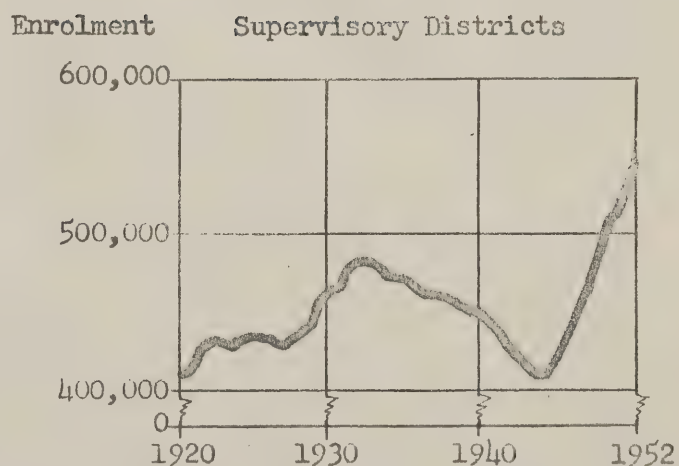

CHART 3

Pupil Enrolments in New York City, Upstate Cities, Villages and Supervisory Districts, 1920 - 1952

<sup>1</sup> Between 1920 and 1935 the number of village districts was increased from 46 to 96. There are now 101. These districts were organized from supervisory districts.

## Statistical Research Service

Vol. 1 No. 2

November 1953

### Pupil Costs

This number of Statistical Research Service presents pupil costs in New York State school districts based upon average daily attendance and the six categories of current expenses. Instructional services are divided into salaries and other expenses of instruction. It is well to point out that these pupil costs are for regular day schools and therefore exclude expenditures for part-time and continuation schools, adult education, summer, evening and other vocational schools or classes not operated as part of the day school program.

Because of the carryover of decimals in the machine processing of the data, the pupil cost for total current expenditures is not always exactly the sum of the other pupil costs. The difference is only a matter of a few cents and is therefore of no significance.

Grouping of districts The grouping of the districts is on a functional basis to facilitate comparison and to eliminate duplication. The usual group of village districts is absorbed in the two groups of union free and central. As is well known, a considerable number of villages are now central districts and the number is increasing annually. In fact, the only group of districts showing an increase in number is

the central districts. It is growing by the absorption of former city and village districts and by the creation of original new central districts.

Pupil costs are presented for the first time for elementary union free districts and common school districts. Because of the large number of these districts, the data on costs have been reduced to a supervisory district basis. It is recognized that this method of presenting such pupil costs is not entirely adequate. A supervisory district with only one or two such districts may present a distorted pupil cost, particularly if the districts have a very low or a very high average daily attendance and the usual expenditures. One example is one supervisory district of Allegany County which had only one common school district operating and it had an average daily attendance of only four pupils. Naturally, to pay the salary of a teacher and to provide all other school expenses produced a pupil cost far above the average. Contrarily a supervisory district in Oneida County had two schools with average daily attendance of 26 and 29 pupils, respectively, thus accounting for a low cost per pupil in this supervisory district.

The use of pupil costs A caution is always in order in the uses to be made of pupil cost data. Such data are only generally comparable one district with another. High costs do not necessarily mean the best educational program

and low costs the poorest. High costs do not necessarily mean extravagance and low costs extreme frugality. There are relationships of cost to program but they are far more complex and far less obvious than the pupil costs themselves reveal.

The least that can be done in making comparisons is to select a reasonable number of districts that have similar characteristics, such as number of pupils in average daily attendance, number of teachers, full valuation of property, geographic location and type of school organization. Costs over a period of years are more likely to be realistic than for one year. Such a procedure levels off unusual costs in any one year due to peculiar conditions.

A summary of pupil costs      The average pupil costs in the four groups of districts are shown below.

Average Pupil Costs by Groups of Districts

Category	Cities	Union Free Academic	Central	Union Free Elementary and Common
General Control	\$10.39	\$11.51	\$6.04	\$4.69
Instruction - Salaries	230.97	217.20	183.16	161.92
Instruction - Other expenses	16.15	22.07	20.84	45.99
Operation	29.22	35.45	31.66	29.52
Maintenance	9.79	15.27	12.85	9.97
Auxiliary Agencies	11.61	26.03	45.87	55.59
Fixed Charges	32.29	27.08	23.17	17.59
Total Current expenses	340.42	354.61	323.61	325.27

Average pupil costs for instructional services are highest in cities where salary schedules are high. Fixed charges are highest in cities due to pension costs. Auxiliary agencies are much higher in central, union free elementary and common districts due largely to transportation expenditures. Other expenses of instruction are high in union free and common districts, due largely to tuition charges for academic pupils and some elementary pupils attending other schools.

As indicated above local school officials will secure better results to compare their own district with several other districts of comparable characteristics than with the average of the whole group in which the local school falls. A subsequent number of Statistical Research Service will present number of pupils, average daily attendance, full valuation of property and tax rate on full value for the groups of districts in this number.

PUPIL COSTS BASED ON AVERAGE DAILY ATTENDANCE, 1951-52

# STATISTICAL RESEARCH SERVICE

SCHOOL ENROLMENTS, FALL OF 1953

*University of the State of New York, State Education Department,  
Bureau of Statistical Services, Albany, N.Y.*

## School Enrolments, Fall of 1953

For a number of years the Bureau of Statistical Services has conducted a survey to determine the number of children enrolled in the public schools as of the beginning of the school term. Generally, the effective date is September 30. From the returns of the survey, a brief release has been distributed showing gains and losses in individual cities and consolidated gains or losses for other types of school districts.

Inasmuch as these beginning -of-year enrolments are the only data available for a current school year (no other enrolments being available until the close of the school year) considerable use is made of them by the Education Department and by public school officials. It is the opinion of the Bureau that more detailed data will be even more useful.

This number of Statistical Research Service presents these details on the following pages. Table I gives enrolments by type of school district and by grade groups. The items can be combined to show all cities (a+b+c), all independent superintendencies (d+e), and all districts under the supervision of district superintendents (f+g+h). Or, they can be combined to show the total of all central districts (b+e+g).

Table II gives enrolments by counties. The county total includes all public schools. Detailed figures are given for each city, independent superintendency (village) and the four central high schools (three in Nassau, one in Erie County.) There is reported also for each county an overall figure for all central districts under the supervision of a district superintendent. No details are currently available for the union free and the common school districts under district superintendents, but estimates have been made of enrolments in these districts in arriving at the county totals.

Detailed information for these districts will be collected in future years.

A caution should be observed in the use of the fall enrolments. They should not be confused with enrolments at end of year (gross registration.) Because of late entrants, mid-year classes and migration of pupils, the gross registration is always larger than the initial September enrolments. In New York State a child is counted in the gross registration of a district even though he left the school after being registered.

Judging from previous experience, gross year-end registration is about 105 per cent of the fall enrolment. Average daily attendance is about 90 per cent of the fall enrolment. These percentages are based on totals for upstate districts only, but in the absence of other more reliable data may be used in individual cases to give an approximate prediction of gross registration and average daily attendance. The prediction is bound to be crude, since the final year-end figures in any district will vary with conditions.

TABLE I

FALL ENROLMENTS BY TYPE OF DISTRICT, NEW YORK STATE PUBLIC SCHOOLS, 1953

Type of district	K-6	7-8	9-12	Total
STATE TOTAL	1 380 167 <sup>1</sup>	306 794 <sup>1</sup>	517 644 <sup>1</sup>	2 204 605 <sup>1</sup>

# STATISTICAL RESEARCH SERVICE

PUPIL COSTS AND  
OTHER COMPARATIVE INFORMATION  
1952--53

*University of the State of New York, State Education Department,  
Bureau of Statistical Services, Albany, N.Y.*

Pupil Costs and Other Comparative Information  
1952-53

Statistical Research Service presents in this number most of the basic information required in making comparative analyses of school systems. In addition to pupil costs it presents total registration, average daily attendance, number of teachers, receipts from state aid and tax on property, full valuations and tax rates on full valuations. The data are for regular day schools and therefore exclude data for part-time schools, adult education, summer schools, evening and other classes not operated as part of the day school program.

Because of the carryover of decimals in the machine processing of the data, the pupil cost for total current expenses is not always the exact sum of the other pupil costs. The difference is a matter of only a few cents and is therefore of no significance.

Grouping of districts The grouping of the districts is on a functional basis to facilitate comparison and to eliminate duplication. The city group excludes the city of Sherrill which is a central district. Villages that are central schools are included with the central districts. There is, however, a separate table of union free village districts. The central group excludes the one city, the elementary central districts and the four central high schools, all of which are grouped in a separate table.

It should be pointed out that central districts are included only after they begin operation as a central district; that is, July 1 after the date of organization.

The use of pupil costs A caution is always in order in the uses to be made of pupil cost data. Such data are only generally comparable one district with another. High costs do not necessarily mean the best educational program and low costs the poorest. High costs do not necessarily mean extravagance and low costs extreme frugality. There are relationships of cost to program but they are far more complex and far less obvious than the pupil costs themselves reveal.

The least that can be done in making comparisons is to select a reasonable number of districts that have similar characteristics, such as number of pupils in average daily attendance, number of teachers, full valuation of property, geographic location and type of school organization. Costs over a period of years are more likely to be realistic than for one year. Such a procedure levels off unusual costs in any one year due to peculiar conditions.

A summary of pupil costs The average pupil costs in the groups of districts are shown below:

Average Pupil Costs by Groups of Districts (1952-53)

Category	City	*Central	Union Free	
			Village	Academic
General Control	\$10.71	\$6.02	\$13.74	\$5.72
Instruction - Salaries	230.63	185.03	227.85	204.19
Instruction - Other expenses	15.41	20.89	20.65	30.70
Operation	29.98	33.18	37.05	33.92
Maintenance	8.95	11.83	13.84	15.85
Auxiliary Agencies	12.29	46.40	26.23	29.03
Fixed Charges	43.26	26.36	30.47	29.31
Total Current expenses	351.23	329.71	369.83	348.72

\*Excludes one city central, 4 central high schools and 15 elementary central districts.

Vol. 3 No. 1

Pupil Costs and Other Comparative Information  
1953-54

Statistical Research Service presents in this number most of the basic information required in making comparative analyses of school systems. In addition to pupil costs it presents total registration, average daily attendance, number of teachers, receipts from state aid and tax on property, full valuations and tax rates on full valuations. The data are for regular day schools and therefore exclude data for part-time schools, adult education, summer schools, evening and other classes not operated as part of the day school program.

Because of the carryover of decimals in the machine processing of the data, the pupil cost for total current expenses is not always the exact sum of the other pupil costs. The difference is a matter of only a few cents and is therefore of no significance.

Grouping of districts The grouping of the districts is on a functional basis to facilitate comparison and to eliminate duplication. The city group excludes the Cities of Little Falls and Sherrill which are central districts. Villages that are central schools are included with the central districts. There is, however, a separate table of union free village districts. The central group excludes the two cities, the elementary central districts and the four central high schools, all of which are grouped in a separate table.

It should be pointed out that central districts are included only after they begin operation as a central district; that is, July 1 after the date of organization.

The use of pupil costs A caution is always in order in the uses to be made of pupil cost data. Such data are only generally comparable one district with another. High costs do not necessarily mean the best educational program and low costs the poorest. High costs do not necessarily mean extravagance and low costs extreme frugality. There are relationships of cost to program but they are far more complex and far less obvious than the pupil costs themselves reveal.

The least that can be done in making comparisons is to select a reasonable number of districts that have similar characteristics, such as number of pupils in average daily attendance, number of teachers, full valuation of property, geographic location and type of school organization. Costs over a period of years are more likely to be realistic than for one year. Such a procedure levels off unusual costs in any one year due to peculiar conditions.

A summary of pupil costs The average pupil costs in the groups of districts are shown below:

Average Pupil Costs by Groups of Districts (1953-54)

Category	City	*Central	Union Free	
			Village	Academic
General Control	\$ 10.64	\$ 6.08	\$ 13.63	\$ 6.28
Instructional Services	249.04	213.64	256.30	248.69
Operation	31.46	34.26	37.88	36.45
Maintenance	11.77	10.84	12.97	18.04
Auxiliary Agencies	12.29	46.16	27.98	31.45
Fixed Charges	45.45	28.73	31.65	32.10
Total Current Expenses	360.65	339.70	380.41	373.01

\*Excludes two city central schools, 4 central high schools and 16 elementary central school districts.
